ScienceYear Group 3Topic Light & Shadow

Vocabulary	Definition
<b>Light Source</b>	An object that produces its own light (e.g. sun, fire).
<b>Reflection</b>	When a light hits a surface and 'bounces' off.
<b>Refraction</b>	When light passes through a different object and its direction changes.
<b>Opaque</b>	An object which <b>does not allow</b> light to pass through it (e.g. wood).
<b>Translucent</b>	An object which <b>allows some</b> light to pass through it. It may be possible to see some unclear images through the object (e.g. tissue paper).
<b>Transparent</b>	An object which <b>allows</b> light to pass through it so that objects behind it can be easily seen (e.g. glass).
<b>Spectrum</b>	A range of colours caused when white light is refracted. A rainbow shows a spectrum of colours.
<b>Rainbow</b>	An arch of colour caused by the refraction of light on water droplets in the air, usually rain ( <b>Red, Orange, Yellow, Green, Blue, Indigo, Violet</b> ).
<b>Prism</b>	A solid 3D shape where two end faces are similar and parallel.
<b>Shadow</b>	A dark area or shape caused by the blockage of light.

Key facts	
1	Light travels in a straight lines
2	Light travels faster than sound.
3	A light year is a unit of measurement for distance. It is the distance light can travel in a year.
4	The size and shape of a shadow changes based on the distance and the angle compared to the light source.
5	Darkness is caused by the absence of light.
6	The moon does <b>not</b> emit its own light – it reflects the light of the sun.
7	Ultraviolet (UV) light is a type of radiation which you can't see but can be dangerous. UV rays can come from the sun.

As the **light source** moves **higher** in relation to the **object**, the **shadow** gets shorter. As the **light source** moves **lower** the **shadow** gets longer.

When white light passes through a glass prism, it is **refracted**. The light changes direction and is then dispersed (spread out) as it exits the **prism**. Depending on the shape of the prism and the angle of the light, we can often see the spectrum of colours.

Light reflecting off a smooth surface.
